

BC 2191 Water Repellent

Description

Basildon Chemicals BC 2191 Silicone Emulsion is an emulsion of a polydimethylsiloxane designed to impart water repellency to glass wool and mineral substrates.

Product Features

- Enhanced water repellency compared to standard silicone emulsions.
- Compatible with most phenolic resin binder solutions.
- Good water repellency at low concentrations.

Applications

BC 2191 has been developed specifically to provide water repellency to glass and mineral wool. It can also be used to impart hydrophobicity to other mineral based articles such as fibre glass boards, mats, pipe sections or tiles.

Method of Use

BC 2191 can be used as supplied or pre-diluted in water. The emulsion may be added to the phenolic resin binder solution but it may be necessary to do this just prior to spraying depending on its compatibility with the system. A starting level of 1% of emulsion in the binder is suggested.

This product should be re-homogenised via gentle stirring/agitation before use as slight 'creaming' can occur with long periods of standing.

Toxicity and Handling

BC 2191 Silicone Emulsion is basically non-hazardous with a very low order of toxicity, although prolonged contact with the skin or contact with the eyes may cause some irritation. See our material safety data sheet for more information.

Storage and Shelf Life

The product should be stored below 32°C and not allowed to freeze. Shelf life of the unopened container is 12 months from date of manufacture. If you wish to use the product after this time please contact us for approval.

Typical Properties

Active content	40%
Appearance	White mobile emulsion
Specific gravity (25°C)	1.0
Diluent	Water

Technical Service

Our technical and sales staff have considerable experience of the use of silicone products in a very wide variety of industries and the benefit of this experience is freely available to all our customers.
