

BC 2231 Dimethiconol Gum and Cyclomethicone

Description

BC 2231 is a blend of volatile clopentsiloxane D5 and a very high viscosity dimethiconol gum polymer, for use in car care applications.

Product Features

Supplied in concentrate form.

Simple to use.

An easy and cost effective method of using a silicone gum in automotive formulations.

Applications

BC 2231 can be used in trim and tyre care products, it has a smooth velvety feel, increases substantivity to the above formulations and is water resistant.

Method of Use

BC 2231 is a concentrate, which allows the addition of a silicone gum to a wide range of polishes and conditioners. It can be further diluted in volatile silicone and is miscible with mineral oil.

Toxicity and Handling

BC 2231 has a low order of toxicity.

See our material safety data sheet for more information.

Storage and Shelf Life

The product should be stored below 32°C. Shelf life of the unopened container is 24 months from date of manufacture. If you wish to use the product after this time please contact us for approval.

Typical Properties

Appearance	Clear, colourless liquid
Silicone content	100%
Specific gravity (25°C)	1.0

Technical Service

Our technical and sales staff have considerable experience of the use of silicone products in a very wide variety of industries and the benefit of this experience is freely available to all our customers.
